MOLE & SKIN TAG REMOVAL

WHY IS THIS PROCEDURE PERFORMED?

- A *Mole or Skin Tag Removal* is done to remove benign skin issues.
- Most common method of removal and treatment is Cryosurgery.

WHAT HAPPENS DURING THIS PROCEDURE?

- No numbing is needed for this procedure.
- In this procedure, depending on the size, depth, and type of the lesion the physician will spray/apply liquid nitrogen on top of the lesion.
- The image shows Cryosurgery devices. (Left) Cotton-tip applicator. (Center) Liquid nitrogen spray. (Right) Cryoprobe.
- The area is then bandaged.

WHAT DO I NEED TO KNOW BEFORE MY PROCEDURE?

- Some possible complications with this procedure include:
 - Bleeding
 - Blisters
 - Infection
 - Hyperpigmentation (skin darkening)
- Most lesions can be treated in a single visit. But depending on the size of the lesion it may take multiple sessions for optimal results.
